## SUMMARY

Second-year Electronics and Telecommunication Engineering student (CGPA 8.86) with hands-on backend experience in Python, Flask, MySQL and REST APIs. National-level hackathon finalist seeking a Software Development / Backend internship.

## SKILLS

**Languages:** C++, Python, JavaScript, Java, C

**Frontend:** HTML, CSS, JavaScript, Bootstrap, Leaflet.js

**Backend & Databases:** Flask, REST APIs, SQL, MySQL, Role-Based Authentication

**Tools:** Git, GitHub, VS Code, PyCharm, XAMPP, Render

**Core Concepts:** Data Structures and Algorithms, Problem Solving, Database Design

**Soft Skills:** Communication, Presentation, Teamwork

## EDUCATION

**HVPM's College of Engineering and Technology, Amravati** – B.E. in Electronics and Telecommunication Engineering (2024 – 2028), CGPA: 8.86

**Brijlal Biyani Science College, Amravati** – 12th (HSC), Science: 82.33%

**Nimbha Vidyalay, Nimbha** – 10th (SSC): 87.88%

## EXPERIENCE

### Backend Developer – Varithon 2026 (National-Level Hackathon)

- Built Flask backend services and REST APIs for Wari Annapurna, powering live nearby-centre discovery and meal availability for pilgrims.
- Designed a relational MySQL schema across 5 core entities (users, centres, meals, crowd data, ratings) with SQL queries for real-time availability lookups.
- Implemented rule-based demand logic comparing current crowd, approaching crowd and available meals to classify each centre as shortage, surplus or high-demand.
- Integrated location-based filtering and backend workflows to return nearby centres in real time and plot them on Leaflet maps.

## PROJECTS

### FoodShare – Smart Food Redistribution Platform | [GitHub](#)

*Tech: Python, Flask, MySQL, REST APIs, HTML, CSS, JavaScript, Bootstrap, Render*

- Built a Flask + MySQL platform with 3 role-based portals (Donor, NGO, Admin) connecting surplus-food donors with NGOs, secured with role-based authentication.
- Designed a custom 4-factor priority algorithm (urgency, freshness, expiry, donor-to-NGO distance) that ranks donations so time-critical food reaches NGOs first.
- Implemented REST APIs and an atomic donation-acceptance workflow so concurrent NGO requests cannot claim the same donation twice.
- Deployed on Render for live access and added a predictive ML interface for admin-level insights.

### Wari Annapurna – Crowd Mobility-Based Smart Food Discovery Platform | [GitHub](#)

*Tech: Python, Flask, MySQL, REST APIs, HTML, CSS, JavaScript, Bootstrap, Leaflet.js*

- Built a Flask + MySQL application helping Warkaris discover nearby food centres and live meal availability.
- Implemented rule-based demand prediction scoring current crowd, approaching crowd and available meals to flag 3 centre states: shortage, surplus, high-demand.
- Developed location-aware REST APIs and Leaflet.js maps to plot nearby Annadan centres.
- Qualified for the Varithon 2026 national-level Grand Finale (MMCOE, Pune) as part of team Rising Coders.

## ACHIEVEMENTS

- Runner-Up, HVPM COET Internal Smart India Hackathon 2026 (team ElectroNova).
- 3rd Prize, PRANETA-26, State-Level Project Competition organized by JDIET, Yavatmal.
- Finalist, Varithon 2026, National-Level Hackathon organized by MMCOE, Pune.
- Semi-Finalist, Build With Bharat 2.0, National-Level Hackathon organized by NIT Delhi.
- Solved 100+ Data Structures and Algorithms problems on LeetCode.
